The laboratory grown diamond described in this Report (Report) has been graded, tested, analyzed, examined and/or inscribed by International Gemological Institute (GL). A laboratory grown diamond is one that has essentially the same chemical, physi-cal and optical properties as a mined diamond, with the exception of being grown by man (a manufactured product). (GL, employs and utilizes those techniques and equip-ment currently available to ISL, including, without limitation. 10X magnification, corrected tiple! louge, binocular microscope, master color companies stones, non-contact-optical instruments and/or processes as deemed appropriate by ISL. This Report includes ad-vanced security features. A duly accredited gemologist or jeweler can advise you with re-spect to the importance of and interrelationship between cut, color, clarity and carat weight.
